Basic Steps in a Structural Plan Review

A working session on reviewing structural designs under current building codes — load paths, cross-discipline coordination, and the issues that come up most.

DATE
Thu, Aug 20, 2026

TIME
8:00 – 4:30 PM

FORMAT
Online Webinar

7 Hrs / 0.7 CEUs

— ABOUT THE COURSE

This class will provide insight into the principles of providing plan review of the structural design of a project under the current building codes. The class will include the basic steps in a structural plan review, the importance of understanding load paths, the importance of communication and collaboration with reviewers of other disciplines, common issues that arise, and other topics relevant to structural plan review. An example project will be reviewed in the class.

Format note — the course walks through a real example project from intake to sign-off, so attendees can see the review steps applied rather than just described.

— PRESENTED BY

Bill Rodgers
Structural Engineer

Principal & Co-Founder, BPR
Consulting Group

Bill is a licensed structural engineer in California and Nevada and has 37 years of experience in the field of structural engineering, including more than 20 years of experience providing structural plan reviews for state and local agencies throughout California and Nevada.

37 Yrs Experience

CA & NV Licensed S.E.

20+ Yrs Plan Review

SVABO Code Development Committee
